

# **“Flipper” Floating Counter Knife BridgeBreaker**

TECHNOLOGY FOR A SUSTAINABLE TOMORROW

## FOCUS

### “Flipper” Floating Counter Knife

The “Flipper” Floating Counter Knife is designed to allow easy access and clean-out of tramp material with little or no effort. Assisted by an “airspring” air cushion, the counterknife drops out of cutting position, allowing tramp material to pass through. Once the contamination is cleared, the counterknife is raised and locks into its operating cutting position.

### BridgeBreaker

Vecoplan’s BridgeBreaker prevents “bridging” - material that gets wedged into position between the sidewalls and hangs there, unable to be processed. The BridgeBreaker clears these wedges so the shredder can continue normal processing operations.
