

SureCut™ Cutting System

Vecoplan®

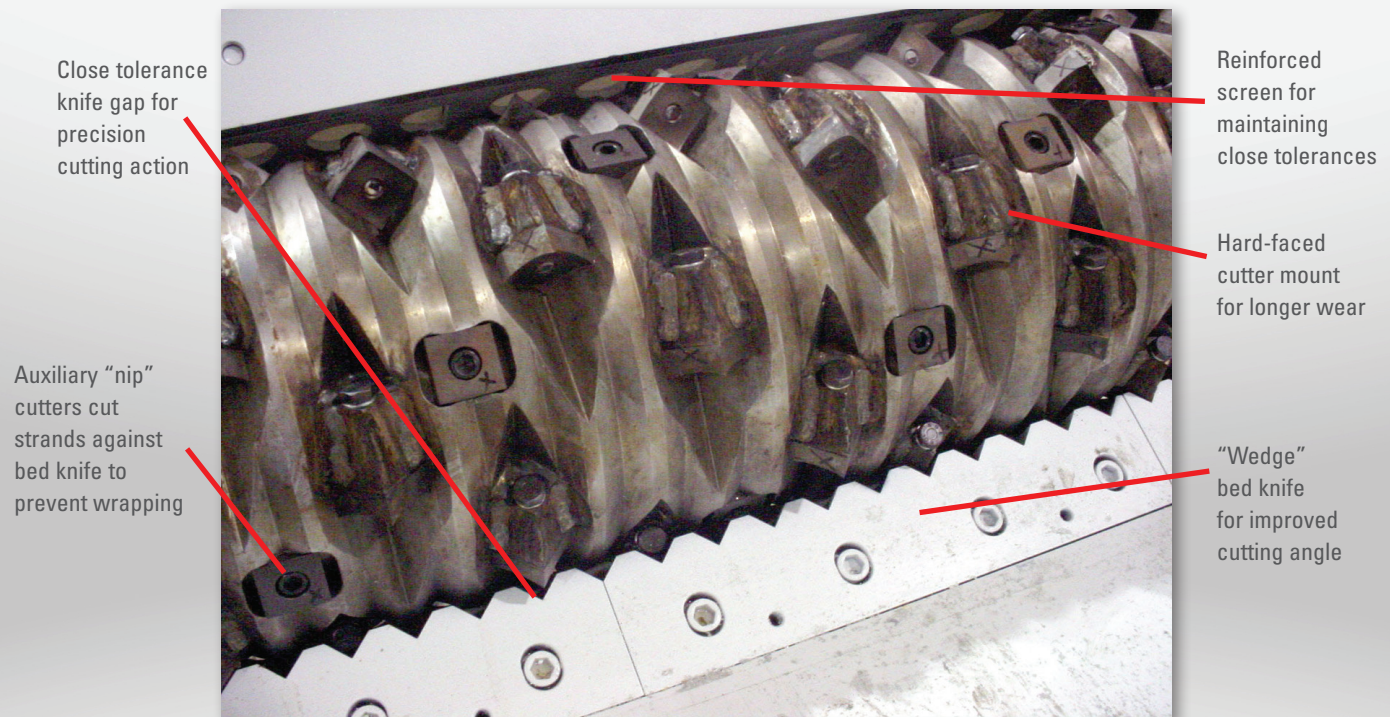

SureCut™ Cutting System

Vecoplan's innovative cutting system designed specifically for processing difficult materials such as plastic film and synthetic fiber materials.

The Latest Innovation from the Global Leader in Advanced Size Reduction Technologies

Vecoplan proudly announces a true breakthrough in film and fiber size reduction.

The **SureCut™** Cutting System

A revolutionary design which eliminates the typical difficulties usually associated with the processing of plastic film and synthetic fiber materials.

Problems with Conventional Systems

SureCut™ Solutions

• Rotor is wrapped by material	• Special "nip" cutters prevent wrapping
• High Heat Buildup	• Extreme cutting efficiency with low speed, high torque
• Material is fed too aggressively	• "Wedge" counterknife optimizes the cutting angle and keep self feeding material within ideal processing limits
• Screen Plugging	• Precision tolerances produce exact cutlengths that flow effortlessly
• Low Bulk Density	• Consistency in particle size
• Premature Drivetrain Component Failure	• Rugged, upsized gear reducers and fluid clutch
