

TUCSTM

Truck Unloading Containment System

Vecoplan[®]

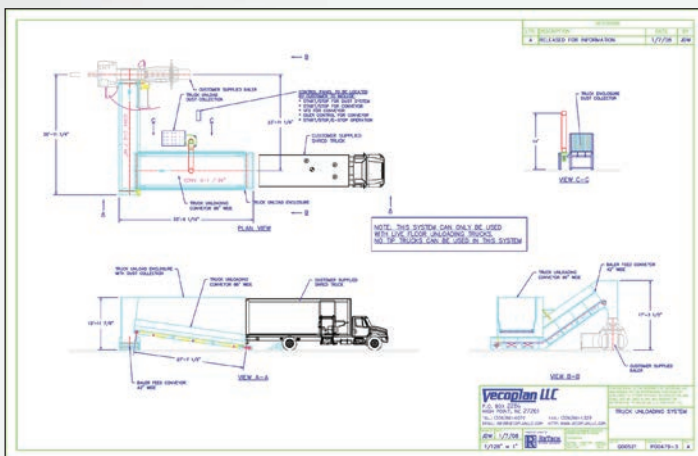

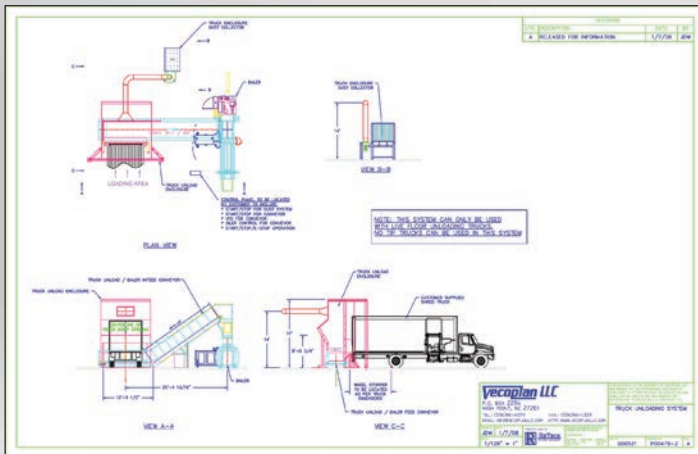

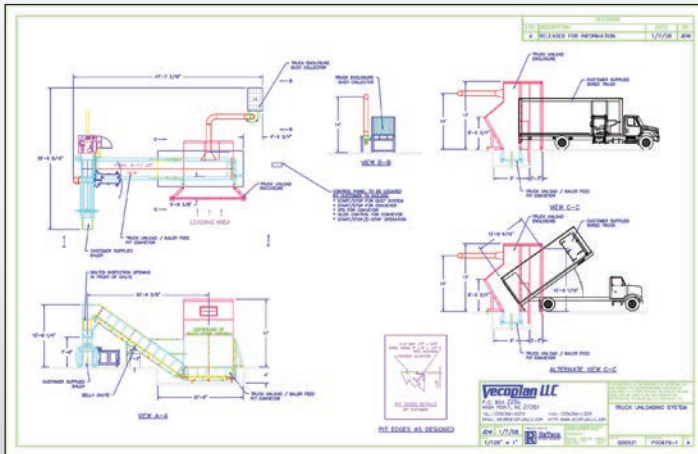

TUCSTM

Truck Unloading Containment System

Designed specifically to expedite the unloading of shred trucks while containing and removing the intrinsic dust, TUCSTM greatly reduces the need for any manual labor when unloading your truck and feeding your baler.

The system includes an unloading containment module constructed of steel and clear vinyl strips that allow drivers to back the truck in, unload and pull away. The containment module includes a built-in pneumatic dust collection system and an enclosed inclined conveyor with feed chute that automatically transfers the shredded paper to your baler. TUCSTM features a small footprint, quick and simple installation, seamless operation, and an economical price tag.

Designed specifically to deliver a quick, easy, and affordable solution for the unloading of shredding trucks, Vecoplan offers a variety of options that enable TUCS™ to be custom tailored to fit your particular operations. These include a true dump & run conveying system for the absolute fastest truck unloading, a floor mounted conveyor for metered feed, and a below floor level conveyor for plants that employ pits.

TUCS™, Vecoplan's Truck Unloading Containment System, maximizes the efficiency of removing the truck's payload, minimizes the time required to do so, greatly reduces manual labor, eliminates dust, automatically feeds your baler, and accomplishes all of this at a very affordable price point.

VECOPLAN is a leading manufacturer of advanced industrial grinding, shredding and size reduction equipment.

VECOPLAN shredding and recycling equipment is the preferred choice for most industrial applications in the secure destruction industry, plastics processing and recycling industries, printing and converting industries, woodworking industries, as well as general waste processing and recovery industries.

Features

- Small Footprint
- More Efficient Pneumatic Dust Collection System Controls Dust, Completely Exchanging and Filtering Air Content Multiple Times a Minute. Additional Collection Point on Baler Controls Baler Dust.
- Controls with baler / Conveyor Interlocks Automatically Meters Material Into Baler.
- Durable Vinyl Strips on Front Eliminates Need for Doors, Remaining Enclosure is Fabricated with Steel which Contains All Material, Eliminating Spillage and Mess.
- Enclosed Incline Conveyor for Baler Loading
- Optional Features to Customize the System to Your Requirements, Including:
 - True Dump-And-Run Conveyors
 - Floor Mounted Metering Conveyors
 - Pit Conveyors
